

Objective

Software Engineer with 4+ years of experience building backend-heavy, distributed systems for large-scale government and enterprise applications. Strong expertise in Node.js, microservices architecture, messaging systems, and cloud-based storage, with hands-on exposure to frontend development using React and Next.js. Currently working on production systems involving AI-driven audits, real-time processing, and high-availability services.

Skills

- **Languages:** JavaScript, TypeScript
- **Backend & APIs:** Node.js, NestJS, Express.js, REST APIs, gRPC, WebSockets
- **Databases:** MongoDB, MySQL, PostgreSQL
- **Messaging & Caching:** Redis, RabbitMQ, Kafka
- **Cloud & Infrastructure:** AWS S3, IAM (concepts), PM2, Docker, Git
- **Frontend:** React.js, Next.js
- **AI & Automation:** OpenAI APIs, Puppeteer, Lighthouse APIs

Experience

Node JS Developer	<u>Netoyed</u>	<i>Noida, India</i>	Jan/2025 - Present
• Developing backend services for UX4G (UX for Governance) initiatives under NeGD / MeitY. • Designed and implemented microservice-based systems using Node.js and NestJS with MongoDB. • Built secure authentication and authorization flows integrated with Parichay SSO. • Developed Audit 360, an AI-powered compliance auditing platform evaluating against GIGW and DBIM guidelines. • Implemented inter-service communication using gRPC, caching with Redis, and async workflows using RabbitMQ. • Integrated AWS S3 for report storage and artifact management. • Enabled real-time updates and status tracking using WebSockets. • Automated audit report generation, significantly reducing manual compliance effort.			
Software Development Engineer	<u>Indicsoft Technologies Pvt Ltd</u>	<i>Noida, India</i>	April/2022 – Jan/2025
• Built and maintained backend services using Node.js, Express, and MySQL for multiple production systems. • Worked on large-scale government applications including Swachh Bharat Mission (Urban) and PMAY, contributing to multiple microservices. • Designed and implemented event-driven services using Kafka for notifications and priority-based message processing. • Integrated third-party services such as AWS S3, SNS, Twilio, and payment gateways. • Collaborated with frontend teams on React-based applications, contributing from setup to deployment. • Implemented authentication and authorization using JWT. • Added logging, monitoring, and performance profiling using Winston and PM2.			
Software Engineer Intern	<u>Indicsoft Technologies Pvt Ltd</u>	<i>Noida, India</i>	Oct/2021 - Mar/2022
• Partnered with senior development teams to architect and launch highly scalable microservices, focusing on maintainable and efficient code practices. • Developed robust RESTful APIs utilizing Node.js and Express, significantly improving backend performance and core functionality. • Actively contributed to daily and ad-hoc team meetings, offering technical insights, clarifying requirements, and proactively proposing solutions to challenges. • Created and maintained comprehensive documentation for project architecture and API specifications, fostering seamless technical understanding and cross-team communication.			

Education

Bachelor of Technology	<u>Maharshi Dayanand University</u>	<i>Rohtak, Haryana</i>	2018 - 2022
• Major in Computer Science and Engineering			

Audit 360 – AI Compliance Platform (Government Project)

Tech Stack: Node.js, NestJS, MongoDB, Redis, RabbitMQ, gRPC, OpenAI API, Puppeteer, AWS S3

- Built an automated auditing system to evaluate government websites for UX and accessibility compliance.
- Used **Puppeteer** to crawl websites and capture full-page screenshots.
- Integrated **OpenAI APIs** to analyze visual and structural compliance against predefined guidelines.
- Generated detailed audit scores and downloadable compliance reports.
- Designed the system using **microservices architecture** for scalability and fault isolation.

Warehouse Monitoring System – West Bengal Government

Tech Stack: NestJS, Python, YOLO, Redis, RabbitMQ, PostgreSQL, Next.js

- Developed a centralized monitoring platform for real-time warehouse operations.
- Implemented AI-based video analysis using **YOLO** for sack/bag counting via RTSP streams.
- Integrated **ANPR (Automatic Number Plate Recognition)** for vehicle tracking.
- Designed role-based dashboards for warehouse, district, and state-level officials.

National Book Trust (NBT) Mobile App

Tech Stack: NestJS, MySQL, Redis, Paytm Payment Gateway

- Built scalable backend APIs for managing digital book catalogs and user transactions.
- Implemented secure payment workflows and optimized data access using Redis caching.
